International application No. PCT/EP2004/002327

	Box	No	o. I Basis of the opinion			
1.	. With regard to the language , this opinion has been established on the basis of the international application in the language in which it was field, unless otherwise indicated under this item.					
		lan	is opinion has been established on the basis of a translation from the original language into the following guage , which is the language of a translation furnished for the purposes of international search ider Rules 12.3 and 23.1(b)).			
2.	With	re ess	gard to any nucleotide and/or amino acid sequence disclosed in the international application and ary to the claimed invention, this opinion has been established on the basis of:			
a. type of material:						
			a sequence listing			
			table(s) related to the sequence listing			
	b. fo	rma	at of material:			
]	in written format			
			in computer readable form			
c. time of filing/furnishing:						
			contained in the international application as filed.			
		3	filed together with the international application in computer readable form.			
			furnished subsequently to this Authority for the purposes of search.			
3.		has	addition, in the case that more than one version or copy of a sequence listing and/or table relating thereto is been filed or furnished, the required statements that the information in the subsequent or additional bies is identical to that in the application as filed or does not go beyond the application as filed, as propriate, were furnished.			
4.	Addi	itior	nal comments:			

International application No. PCT/EP2004/002327

Box No. II		Priority					
1. 🖾	The fo	lowing document has not been furnished:					
	⋈	copy of the earlier application whose priority has been claimed (Rule 43bis.1 and 66.7(a)).					
		translation of the earlier application whose priority has been claimed (Rule 43bis.1 and 66.7(b)).					
		quently it has not been possible to consider the validity of the priority claim. This opinion has neless been established on the assumption that the relevant date is the claimed priority date.					
2. 🗆	has be	pinion has been established as if no priority had been claimed due to the fact that the priority claim en found invalid (Rules 43 <i>bis</i> .1 and 64.1). Thus for the purposes of this opinion, the international ate indicated above is considered to be the relevant date.					
3. Add	ditional c	observations, if necessary:					

International application No. PCT/EP2004/002327

Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability							
The questions whether the claimed invention appears to be novel, to involve an inventive step (to be non obvious), or to be industrially applicable have not been examined in respect of:							
	the entire international application,						
\boxtimes	claims Nos. 1-7 (in part)						
because:							
	the said international application, or the said claims Nos. relate to the following subject matter which does not require an international preliminary examination (specify):						
	the description, claims or drawings (indicate particular elements below) or said claims Nos. are so unclear that no meaningful opinion could be-formed (specify):						
	the claims, or said claims Nos. are so inadequately supported by the description that no meaningful opinion could be formed.						
Ø	no international search report has been established for the whole application or for said claims Nos. 1-7 (in part)						
	the nucleotide and/or amino acid sequence listing does not comply with the standard provided for in Annex C of the Administrative Instructions in that:						
	the written form		has not been furnished				
			does not comply with the standard				
	the computer readable form		has not been furnished				
-			does not comply with the standard				
	the tables related to the nucleotide and/or amino acid sequence listing, if in computer readable form only, do not comply with the technical requirements provided for in Annex C-bis of the Administrative Instructions.						
	See separate sheet for further details						

International application No. PCT/EP2004/002327

Box No. V Reasoned statement under Rule 43bis.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)

Yes: Claims

3,5,7

No: Claims

1-7

No: Claims

2. Citations and explanations

see separate sheet

Box No. VIII Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

see separate sheet

Re Item V.

Present claims 2-7 relate to an extremely large number of possible methods, whereas the application provides support within the meaning of Article 6 PCT and disclosure within the meaning of Article 5 PCT for only a very limited number of such products. In the present case, the claims so lack support, and the application so lacks disclosure, that a meaningful search over the whole of the claimed scope is impossible. Independent of the above reasoning, the claims also contain so many options, variables, possible permutations and provisos that a lack of clarity within the meaning of Article 6 PCT arises to such an extent as to render a meaningful search of the claims impossible.

Present claim 1 relates to a product defined by reference to a desirable characteristic and property, namely almost complete isotropy and dimensions \leq 500 μ m. The claim covers all products having this characteristic and property, whereas the application provides support within the meaning of Article 6 PCT and disclosure within the meaning of Article 5 PCT for only a very limited number of such products. In the present case, the claims so lack support, and the application so lacks disclosure, that a meaningful search over the whole of the claimed scope is impossible.

Thus the search was carried out for those parts of the claims which appear to be clear, supported and disclosed, namely those parts relating to the process of producing a mould having a structured surface, taking a cast of this mould & using the cast as a further mould for sol-gel casting of silica and repeating until the desired dimensions of claim 1 are achieved through shrinkage to produce a silica glass optical product having a micro-structured surface – also the silica glass optical product having a micro-structured surface with a dimension of \leq 500 μm obtainable by sol-gel processing.

Consequently Item V of the written opinion is restricted to what was searched.

2 The following documents are referred to in this communication:

D1: WO 93/21120 A

D2: EP 0 705 797 A

The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of independent claims 1, 2, 4, 6 is not new in the sense of Article 33(2) PCT, for reasons which follow.

Document D1 discloses a sol-gel process of producing silica glass optical

elements having micro-structured surfaces of dimension < 500 μ m by repeated

Form PCT/Separate Sheet/237 (Sheet 1) (EPO-January 2004)

miniaturisation of the sol-gel derived body using an intermediate body as a mould for further processing based on the same insight re shrinkage of the gel and isotropy (see e.g. page 3, § 2 to page 4, § 1; page 6, § 2; claim 1).

- Whilst new (in the sense of Article 33(2) PCT) compared with document D1, dependent claims 3, 5 7 do not contain any features which, in combination with the features of any claim to which they refer, meet the requirements of the PCT in respect of inventive step (Article 33(3) PCT).

 Re claim 3: the skilled person would find a material for the master mould that would enable the fine structure to be formed in its surface, aluminium is well known to be easily machinable to form such structures and suitable as a mould for sol-gel processing. Re claim 5: it is also normal in the art to prevent sticking, should such occur, by lubricating the mould. Re claim 7: the addition of dopants such as those defined in claim 7 are common in the art, see also document D2.
- 5 Claims 1-7 meet the criteria of Article 33(4) PCT as they can be used to produce glass elements, the latter for optical applications.

Re Item VIII.

1 Most of the embodiments indicated in table 1 on page 11 of the present international application do not fall within the definition of either independent claim 1 for a product or claim 2 for a process. Neither claim 1 nor claim 2 meets the criteria of Article 6 PCT in respect of support and clarity, nor does the application meet the criteria of Article 5 PCT in respect of disclosure.
